

Abstract of the Disclosure

The present invention relates to a compound of formula (I):

wherein:

R₃ is selected from the group consisting of 1-naphthyl, 2-naphthyl and cycloalkylphenyl;

and

R₄ and R₅ taken together form a ring having from 5 to 10 carbon atoms.

Additionally, the invention provides a therapeutic method for preventing or treating a pathological condition or symptom in a mammal subject, such as a human, wherein increased angiogenesis is desired, comprising administering to a mammal in need of such therapy an effective amount of the aforementioned thiophene selective adenosine A₁ allosteric enhancer.
